Car Service Management Platform - Data Warehouse

UML database notation | Overview of 4 fact tables and 8 dimensions

DIMENSION TABLES

dw.dim_date
Dimension table

dw.dim_customer
Dimension table

dw.dim_vehicle
Dimension table

dw.dim_mechanic
Dimension table

dw.dim_service
Dimension table

dw.dim_supplier
Dimension table

dw.dim_part
Dimension table

dw.dim_payment_method
Dimension table

FACT TABLES

dw.fact_repair
Fact table
Repair-level measures: service, parts, total

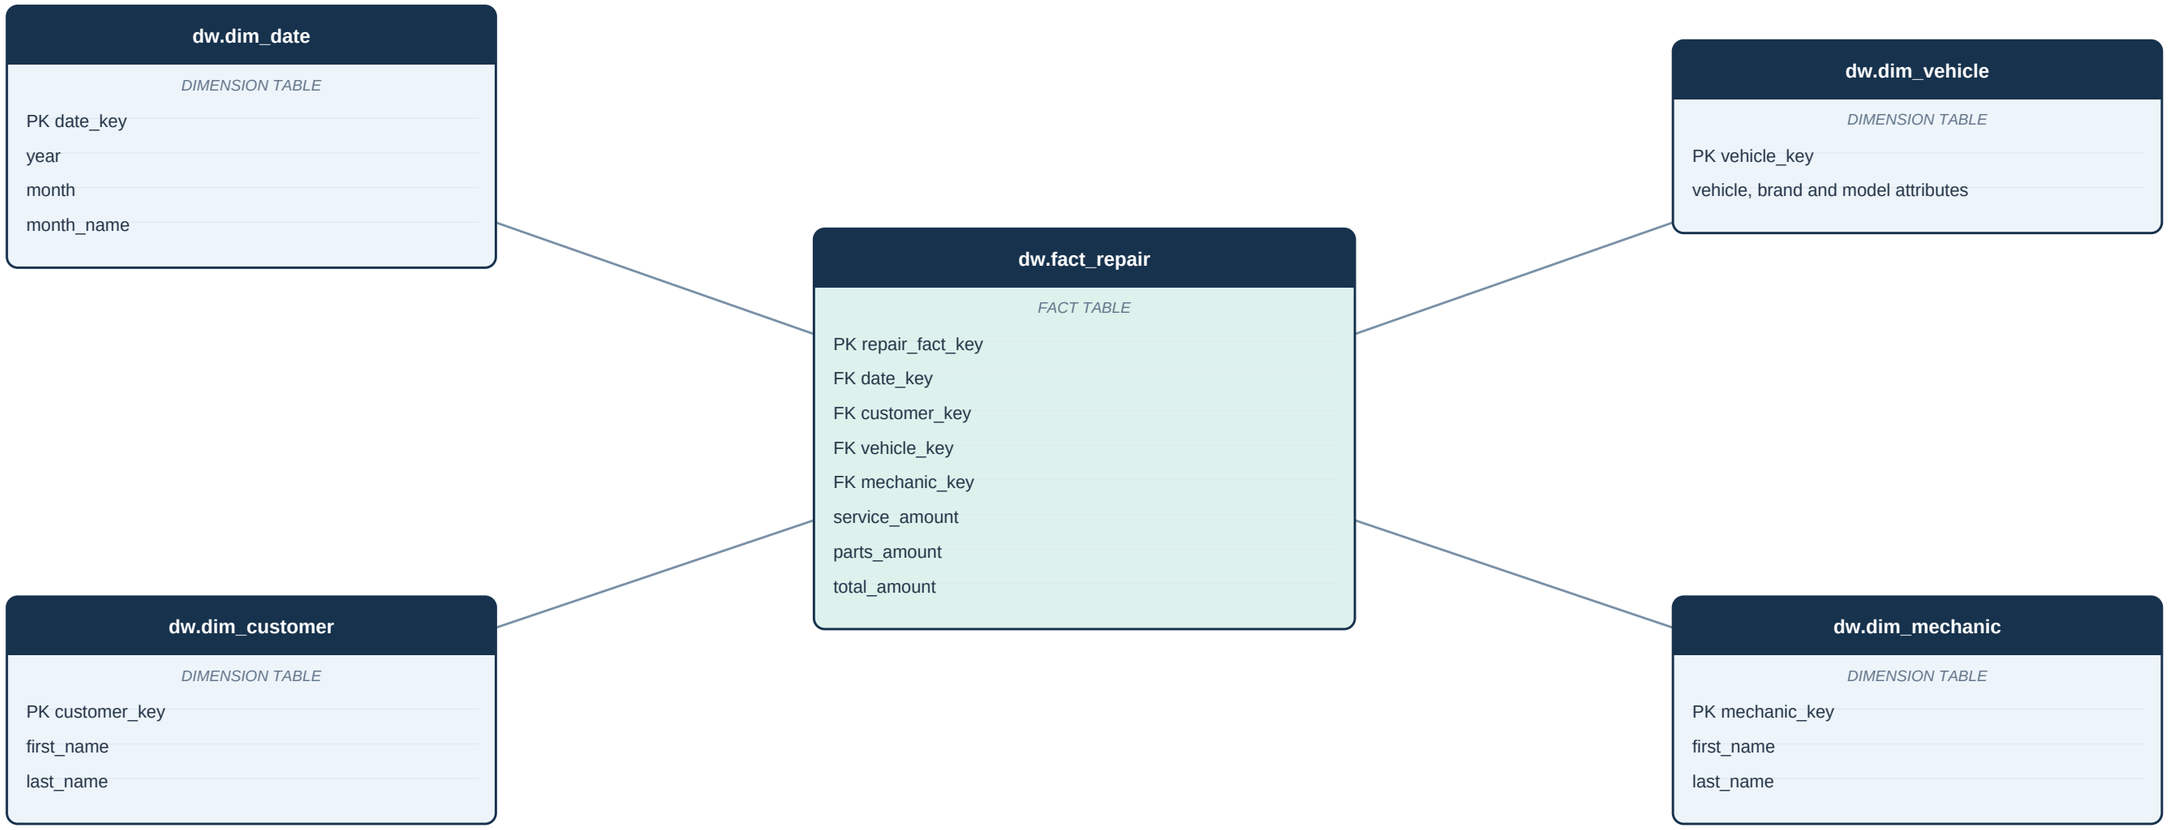
dw.fact_service_usage
Fact table
Service quantities and amounts

dw.fact_parts_usage
Fact table
Part quantities and amounts

dw.fact_payment
Fact table
Payment amounts by method

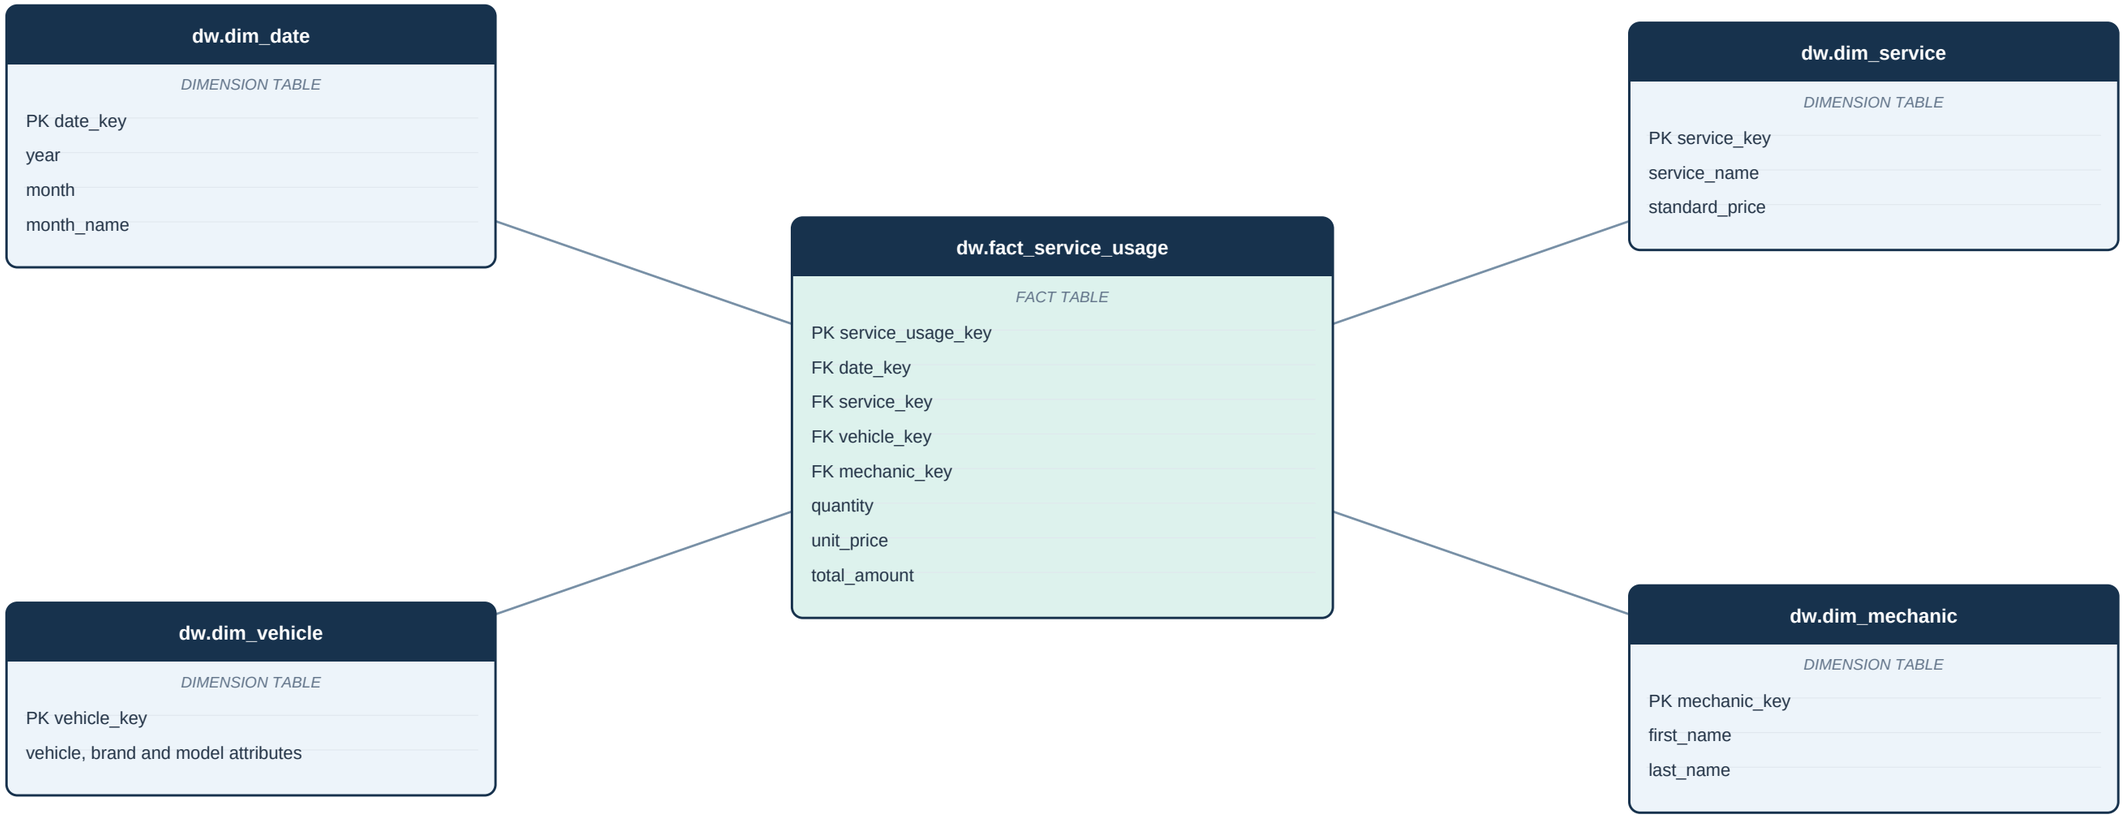
Fact tables connect to relevant dimensions through surrogate keys (date, customer, vehicle, mechanic, service, part, supplier and payment method).

Repair fact table and its dimensions



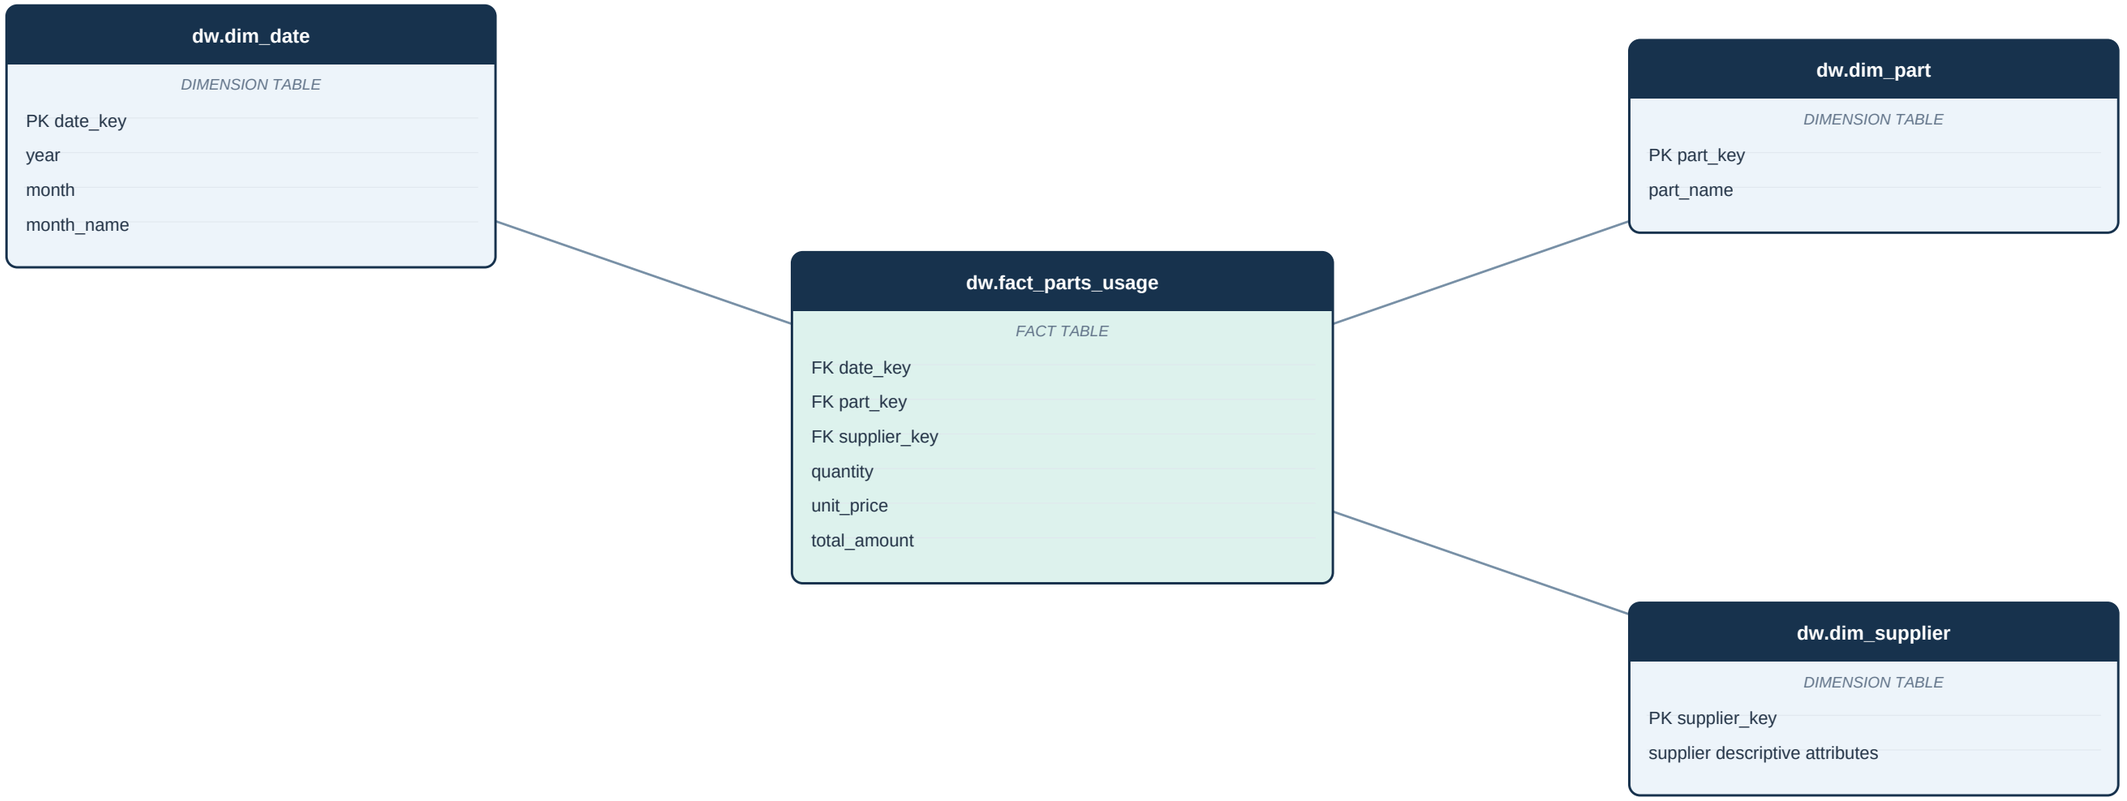
PK = primary key; FK = foreign key. Field names shown are those supported by the project documentation and analytics queries; descriptive dimension attributes are summarized where exact physical names are not documented.

Service usage fact table and its dimensions



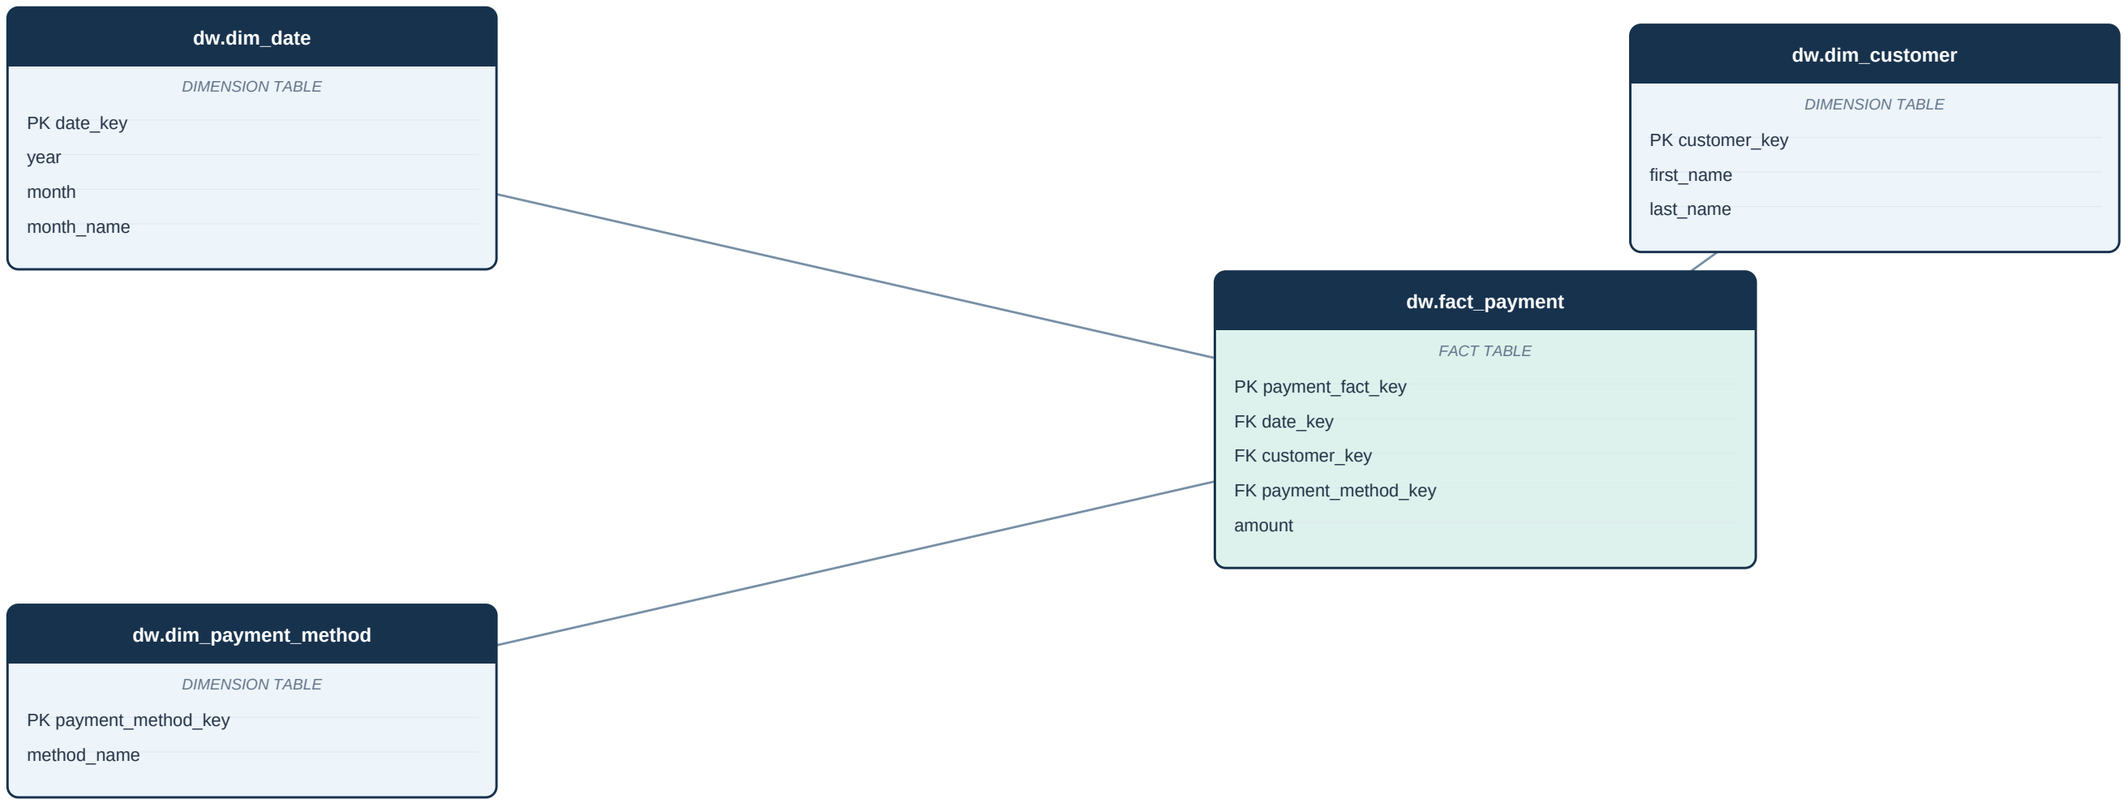
PK = primary key; FK = foreign key. Field names shown are those supported by the project documentation and analytics queries; descriptive dimension attributes are summarized where exact physical names are not documented.

Parts usage fact table and its dimensions



PK = primary key; FK = foreign key. Field names shown are those supported by the project documentation and analytics queries; descriptive dimension attributes are summarized where exact physical names are not documented.

Payment fact table and its dimensions



PK = primary key; FK = foreign key. Field names shown are those supported by the project documentation and analytics queries; descriptive dimension attributes are summarized where exact physical names are not documented.
